

Testimonial

Mr. Zhekai Jiang, a Chinese national born on July 2, 2001, joined Oracle Software (Schweiz) GmbH on January 15, 2023. He completed an internship in the Open-Source Corporate Architecture Services and Solutions (OCASS) team at our offices located at Prime Tower, Hardstrasse 201, Zürich, Switzerland.

He was responsible for the following tasks:

- Designing and implementing a statistics dashboard for GraalVM Download Service (GDS), a service which allows users to download GraalVM artifacts as part of CI/CD pipelines or via command-line and other scripted (non-interactive) software. The statistics dashboard allows the GraalVM release team to plot the download numbers of artifacts, filtered by date range and metadata and grouped by time intervals and artifact metadata;
- Completing various other small- to medium-sized tasks in GDS, including bugfixes, performance improvements, code quality enhancements, and others;
- Communicating with stakeholders (GraalVM release team, leadership) and implementing their feedback.

Mr. Jiang was able to execute complex tasks on his own, while also being a great team player and a good person to work with. He has proven to be an excellent colleague during his internship with Oracle. Mr. Jiang was extremely motivated, reliable and committed in the performance of his tasks. His efficient, goal-oriented and precise working methods allowed him to deliver good results at all times.

Mr. Jiang has shown extensive knowledge of web application development – both frontend and backend, which allowed him to quickly understand our existing application. In the process of the internship, he also showed that he is comfortable to work outside of his field of expertise.

The internship of Mr. Jiang ended on August 15, 2023. We would like to take this opportunity to thank him for his valuable contributions and wish him all the best for his future career.
